

RFP Question # 7

1. Does the HMEE engine have to meet EPA certifications with JP-8?
2. Does the HMEE engine that is in the Phase 1 proposed vehicle have to be certified to EPA Heavy Duty Highway Engines Model Year 2004 and Later Standards or can it just be

Answer: 1. PD Paragraph 3.2.3.1 requires that the engine comply with EPA emissions standards for Heavy Duty Highway Engines, Model Year 2004 and Later. The use of JP-8 does **NOT** demand re-certification of engines. In the PD, the offerors are being informed that JP-8 will be used during performance testing. There is no intention that the Government will re-certify, or request the supplier to re-certify the engines for emissions compliance using JP-8.

2. The Phase 2 (Production) HMEE engine must be EPA certified. For Phase 1 purposes, EPA compliance is acceptable. For non-certified engines, greater risk may be assigned to a proposal depending on the degree to which the Phase 1 (SD) engine is compliant.
